Roadmap

Motivation

Content

Section

Motivation

A more visual opening

Main message

A presentation feels better when every slide has one visual hierarchy: title, key statement, then supporting detail.

Avoid

- too many bullets
- default Beamer colors
- dense equations without context

Prefer

- large key statements
- restrained color accents
- figures with short captions

Section

Content

Physics slide example

Key interpretation

The equation should support the story, not replace it.

- introduce symbols before using them
- show limits and assumptions
- keep derivations in backup slides

Example

$$E(t) = E_0 e^{-t^2/2\sigma^2} \cos\left(\omega_0 t + \frac{1}{2}\beta t^2\right)$$
